Amendments to the Specification

Please replace the specification of record with the substitute specification enclosed herewith.

Please delete and replace title with:

System and Method of Parsing a Template for Generating Presentation Data ~~System and Method for Providing and Updating Information Via a Browser.~~

Please delete and replace Abstract with:

A method performed by an information system application service is disclosed. A template is parsed to identify a set of elements that form a unique key. The set of elements includes a group name, subgroup name, and sequence element. A value is retrieved from a data store using the unique key. Presentation data is generated from the template by replacing the set of elements with the retrieved value. In an alternative embodiment, a method for updating a data store is disclosed. A messaging framework message received from a client is parsed to identify a set of elements that form a unique key and associated update value. A value is updated in the data store with the identified value using the unique key to uniquely select a particular value from the data store for updating. An information system that generates presentation data and updates a data store is also disclosed.

~~A method, according to various aspects of the present invention, is performed by a server for updating a store. The method includes, in any order: (a) parsing a template according to a markup language, the markup language having a start tag that includes an attribute value, parsing being performed to determine a value name from the attribute value; (b) preparing a key that includes the value name; (c) preparing a request having a portion of the template after substituting the key for at least the attribute value; (d) receiving a message having the key and an update value; and (e) updating the store at a record accessed in accordance with the key.~~
